✦ Physical Medicine ✦ Chiropractic ✦ Massage Therapy ✦ Physical Therapy ✦  
*We have it all under one roof!!*

## Condition of the Week – Peripheral Neuropathy

Neuropathy is weakness, shooting pain, tingling, numbness, and sensitivity that occurs as a result of nerve damage. Peripheral means “on the outside,” and peripheral neuropathy refers to neuropathy that affects the nerves carrying information from the brain and spinal cord (central nervous system) out to the rest of the body. You can get neuropathy in the hands and feet, and it can move further up the limbs as it progresses.

### Symptoms may include:

- Bodily Numbness and Tingling ➤ Cramps ➤ Muscular Weakness ➤ Gastric Problems
- Low Blood Pressure ➤ Loss of Balance ➤ Localized Pain ➤ Abnormal Gait

## STOP Living with Neuropathy Today! We Can Help!!!

### Learn about TESLAMAX

Developed by a leading medical device inventor

- Two synergistic therapies to rebuild damaged nerves
- Deep muscle contractions improving blood flow
- No pain during therapy
- Fast improvement with treatment
